

SUPERVISED LEARNING IN R: CLASSIFICATION

# **Classification with nearest neighbors**

Brett Lantz Instructor

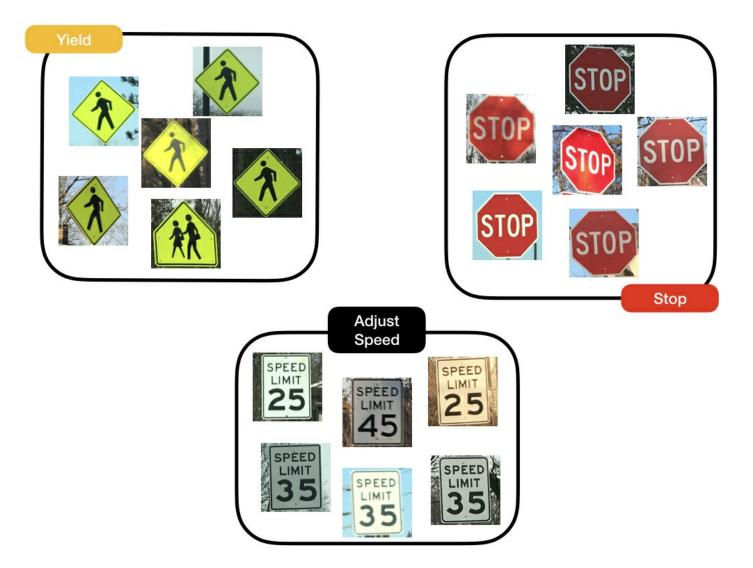

#### Classification tasks for driverless cars

#### Supervised Learning in R: Classification

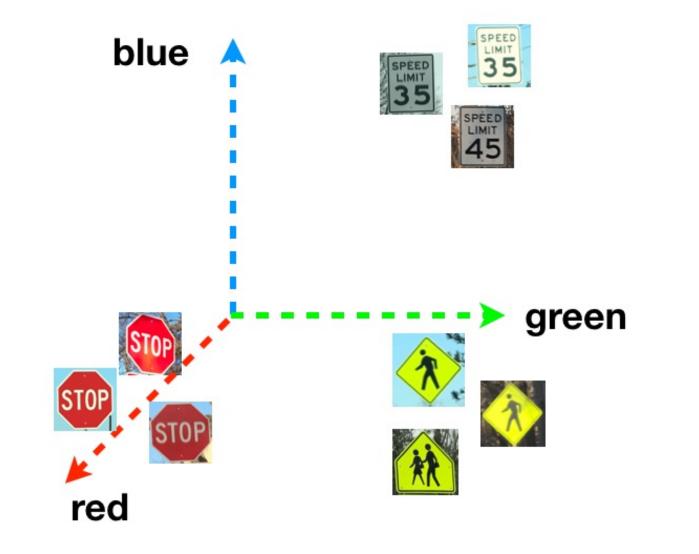

#### **Understanding Nearest Neighbors**

#### Measuring similarity with distance

dist $(p,q) = \sqrt{(p_1 - q_1)^2 + (p_2 - q_2)^2 + \dots + (p_n - q_n)^2}$ 

## Applying nearest neighbors in R

library(class) pred <- knn(training\_data, testing\_data, training\_labels)</pre>

# Let's practice!

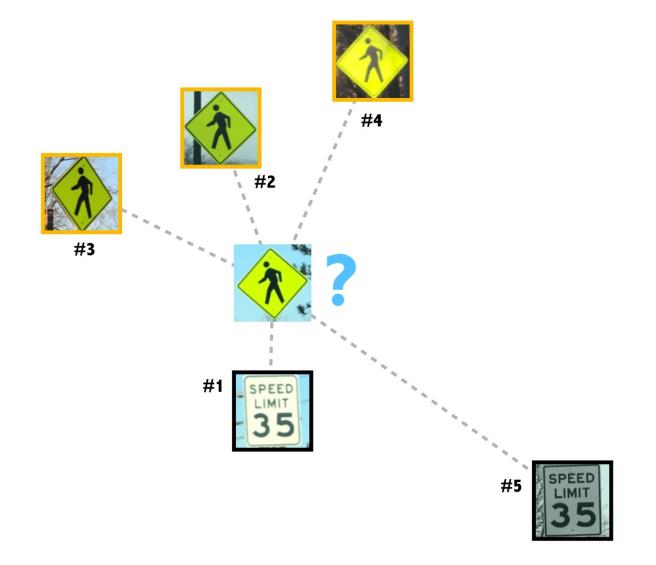

# What about the 'k' in **kNN?**

Brett Lantz Instructor

#### Supervised Learning in R: Classification

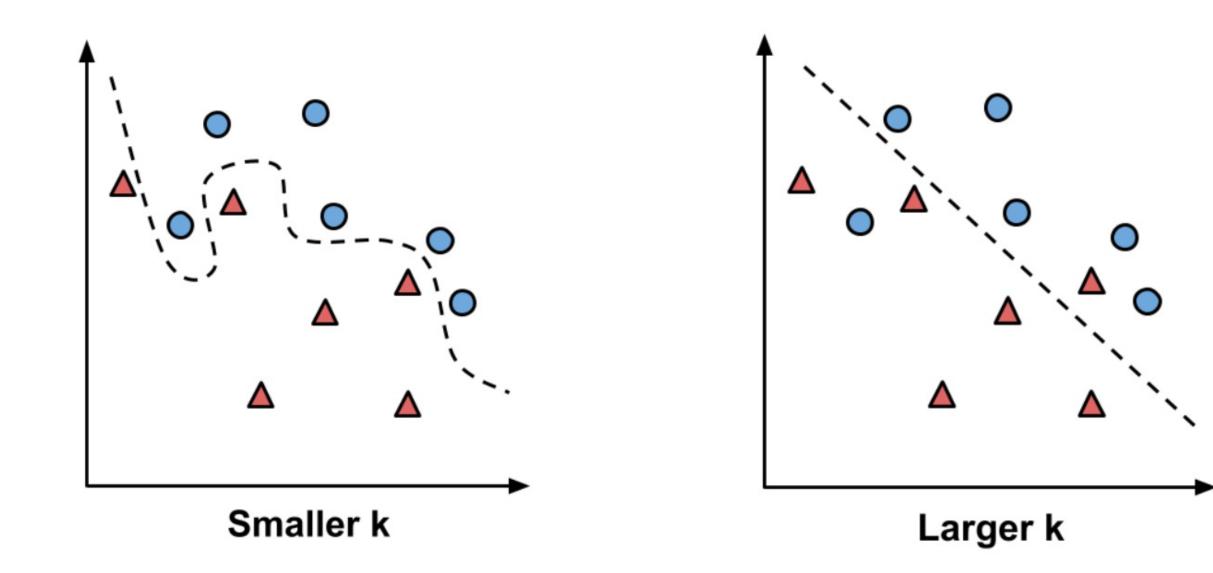

## Choosing 'k' neighbors

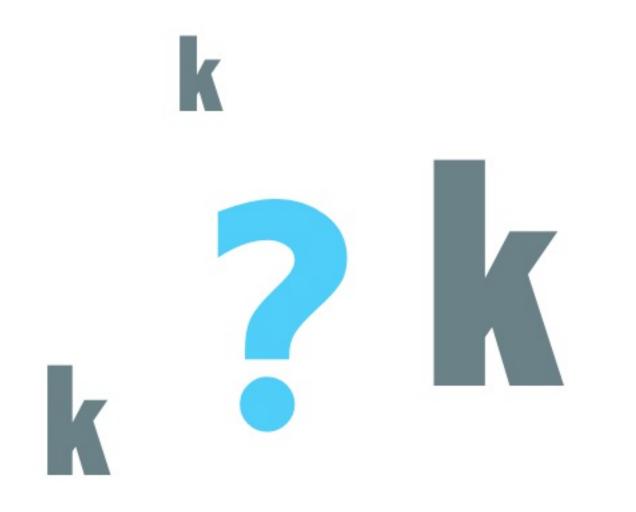

#### Bigger 'k' is not always better

#### Choosing 'k'

# Let's practice!

SUPERVISED LEARNING IN R: CLASSIFICATION

# Data preparation for kNN

Brett Lantz Instructor

#### kNN assumes numeric data

rectangle = 1

diamond = 0

rectangle = 0

diamond = 1

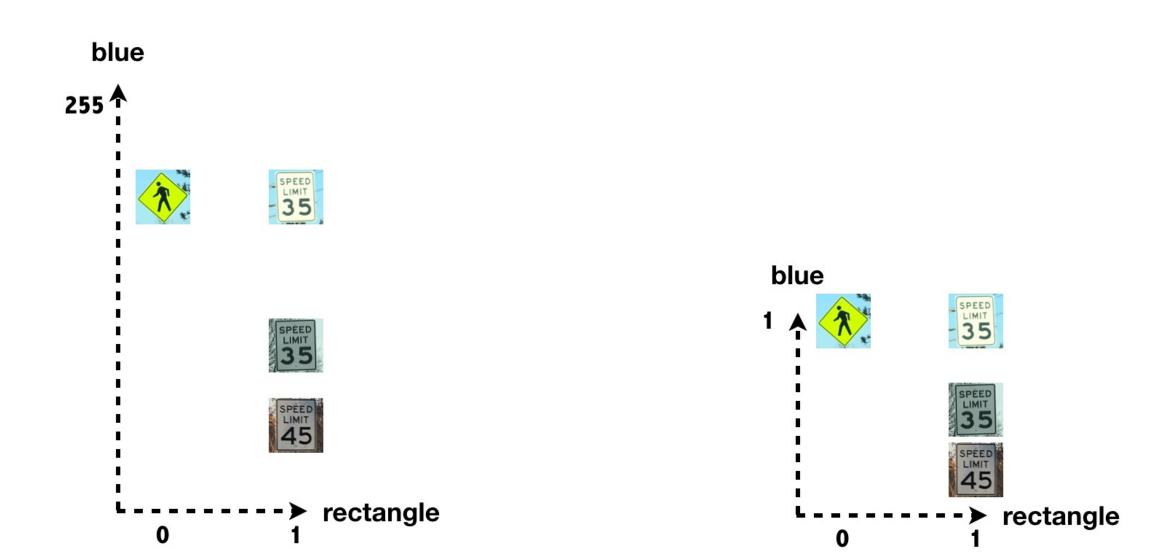

rectangle = 0

diamond = 0

#### kNN benefits from normalized data

## Normalizing data in R

```
# define a min-max normalize() function
normalize <- function(x) {</pre>
  return((x - min(x)) / (max(x) - min(x)))
}
# normalized version of r1
summary(normalize(signs$r1))
  Min. 1st Qu. Median Mean 3rd Qu.
                                      Max.
 0.0000 0.1935 0.3528 0.4046 0.6129 1.0000
# un-normalized version of r1
summary(signs$r1)
  Min. 1st Qu. Median Mean 3rd Qu.
                                      Max.
   3.0 51.0 90.5 103.3 155.0
                                      251.0
```
